### Exercise 1: Kotlin Syntax Basics

#### 1. Variables and Data Types:

- Create variables of different data types: `Int`, `Double`, `String`, `Boolean`.
- Print the variables using `println`.

#### Conditional Statements:

- Create a simple program that checks if a number is positive, negative, or zero.

#### Loops:

- Write a program that prints numbers from 1 to 10 using `for` and `while` loops

#### Collections:

- Create a list of numbers, iterate through the list, and print the sum of all numbers.

Console log of Exercise1.main:

```
int (Kotlin reflection is not available) is int
double (Kotlin reflection is not available) is double
class java.lang.String (Kotlin reflection is not available) is string
boolean (Kotlin reflection is not available) is boolean

is 5 a positive, negative or zero: positive

21
```

## Exercise 2: Kotlin OOP (Object-Oriented Programming)

### 1. Create a **Person** class:

- Define properties for **name**, **age**, and **email**.
- Create a method to display the person's details.

### Inheritance:

- Create a class **Employee** that inherits from the **Person** class.
- Add a property for **salary**.
- Override the **displayInfo** method to include the salary.

### Encapsulation:

- Create a **BankAccount** class with a private property **balance**.
- Provide methods to **deposit** and **withdraw** money, ensuring the balance never goes negative.

### Output for Exercise 2:

```
name: Yerulan
age: 23
email: turgan6ek@mail.ru

name: Yerulan
age: 23
email: email
salary: 107.7
Exception in thread "main" java.lang.Exception Create breakpoint : Amount to withdraw must not be more than your current balance!
    at kz.kbtu.assignment1.BankAccount.withdraw(Excercise2.kt:46)
    at kz.kbtu.assignment1.Excercise2Kt.main(Excercise2.kt:18)
    at kz.kbtu.assignment1.Excercise2Kt.main(Excercise2.kt)

Process finished with exit code 1
```

## Exercise 3: Kotlin Functions

### 1. Basic Function:

- Write a function that takes two integers as arguments and returns their sum

### Lambda Functions:

- Create a lambda function that multiplies two numbers and returns the result

### Higher-Order Functions:

- Write a function that takes a lambda function as a parameter and applies it to two integers.

```
/Library/Java/JavaVirtualMachines/openjdk.jdk/Contents/Home/bin/java
sum of 5 and 3 is: 8

highOrderMultiply: 5 * 10 =
50

Process finished with exit code 0
```

## Exercise 4: Android Layout in Kotlin (Instagram-like Layout)

### 1. Set Up the Android Project:

- Create a new Android project in Android Studio.
- Ensure you have a Kotlin-based project.

### 2. Design the Layout:

- Create a new XML layout file (`activity_main.xml`) for a simple Instagram-like user interface.
- Include elements like `ImageView`, `TextView`, and `RecyclerView` for the feed

### Create the RecyclerView Adapter:

- Set up the `RecyclerView` to display a feed of posts with `ImageView` for the picture and `TextView` for the caption.

### MainActivity Setup:

- Initialize the `RecyclerView` in `MainActivity` and populate it with sample data

## Demo for Exercise 4:
